

Assignment no 9

Step 1:-

Begin by opening Command Prompt and navigating to the XAMPP htdocs directory at C:\xampp\htdocs. Once there, run laravel new avinash to create a new Laravel project.

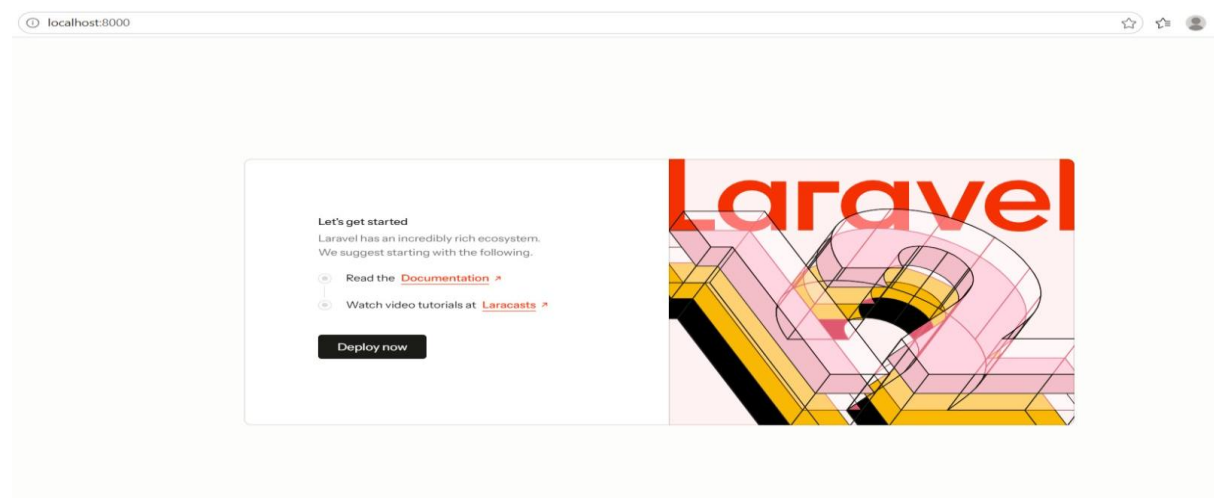

During setup, select **None** for the Starter Kit, **0** for the Testing Framework, **No** for AI-assisted coding, **MySQL** as the database, **Yes** for default database migration, and **Yes** when prompted about ignoring scripts.

After the project is created, move into the project folder with `cd avinash` and start the development server using `composer run dev`. Finally, open your browser and visit `http://localhost:8000` to view the running application.

```
Application ready in [avinash]. You can start your local development using:
→ cd avinash
→ composer run dev

New to Laravel? Check out our documentation. Build something amazing!

C:\xampp.php\htdocs>cd avinash
C:\xampp.php\htdocs\avinash>composer run dev
> Composer\Config::disableProcessTimeout
> npx concurrently -c "#93c5fd,#c4b5fd,#fdba74" "php artisan serve" "php artisan queue:listen"
[vite]
[vite] > dev
[vite] > vite
[vite]
[queue]
[queue] INFO Processing jobs from the [default] queue.
[queue]
[server]
[server] INFO Server running on [http://127.0.0.1:8000].
[server]
[server] Press Ctrl+C to stop the server
[server]
[vite]
[vite] VITE v7.3.3 ready in 561 ms
[vite]
[vite] → Local: http://localhost:5173/
[vite] → Network: use --host to expose
[vite]
[vite] LARAVEL v12.59.0 plugin v2.1.0
[vite]
[vite] → APP_URL: http://localhost:8000
[server] 2026-05-17 15:46:20 / .....
[server] 2026-05-17 15:46:21 /favicon.ico .....
```

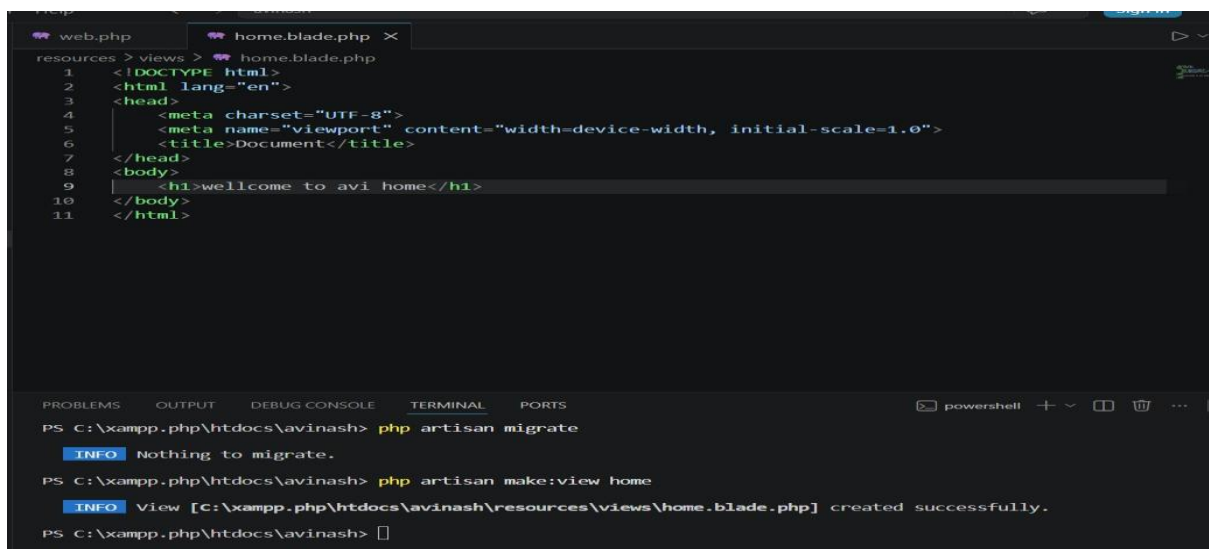

Step 2 :-

Creating a View and Defining a Route in Laravel

Start by running the command `php artisan make:view home` to create a new view file named **home**. Next, open the `web.php` file and define the route for the home page so Laravel knows how to handle incoming requests to that URL.

Once the route is set up, open the `home.blade.php` file and add the necessary HTML content to build your page structure.

After saving all changes, launch your browser and navigate to `http://localhost:8000/home` to see your home page displayed.

The screenshot shows the Visual Studio Code editor with two files open: `web.php` and `home.blade.php`. The `home.blade.php` file contains the following HTML code:

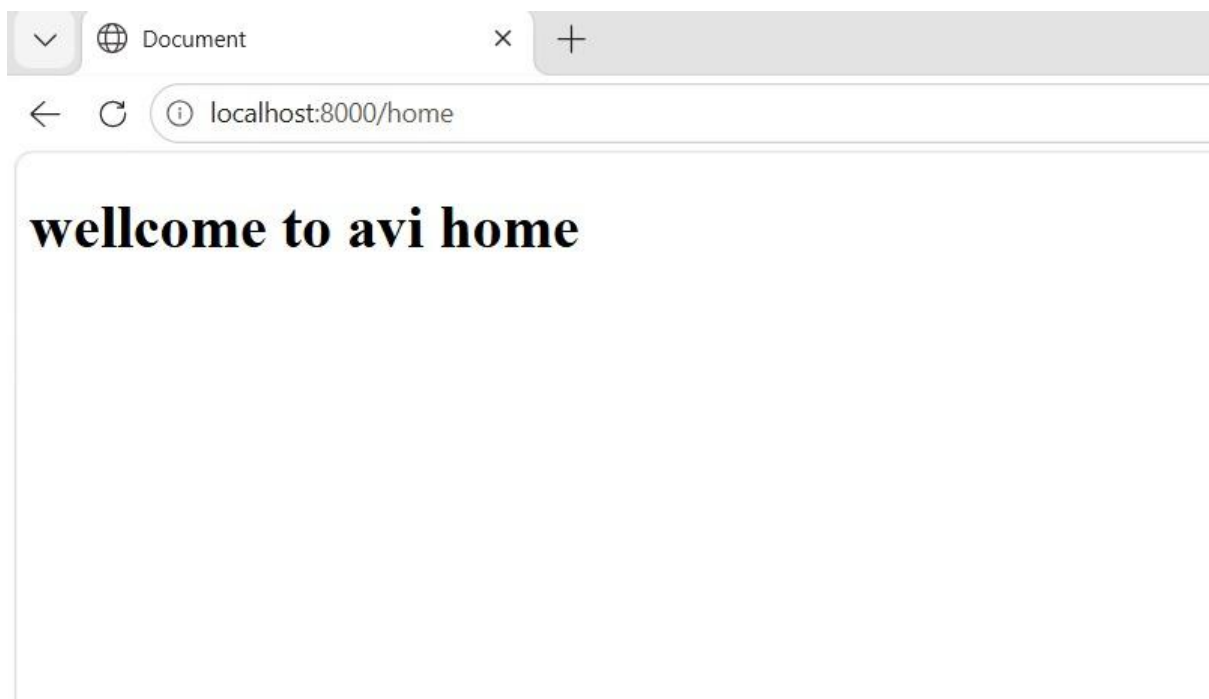

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <h1>wellcome to avi home</h1>
10 </body>
11 </html>
```

Below the editor, the terminal window shows the following commands and output:

```
PS C:\xampp.php\htdocs\avinash> php artisan migrate
[INFO] Nothing to migrate.

PS C:\xampp.php\htdocs\avinash> php artisan make:view home
[INFO] View [C:\xampp.php\htdocs\avinash\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\avinash>
```

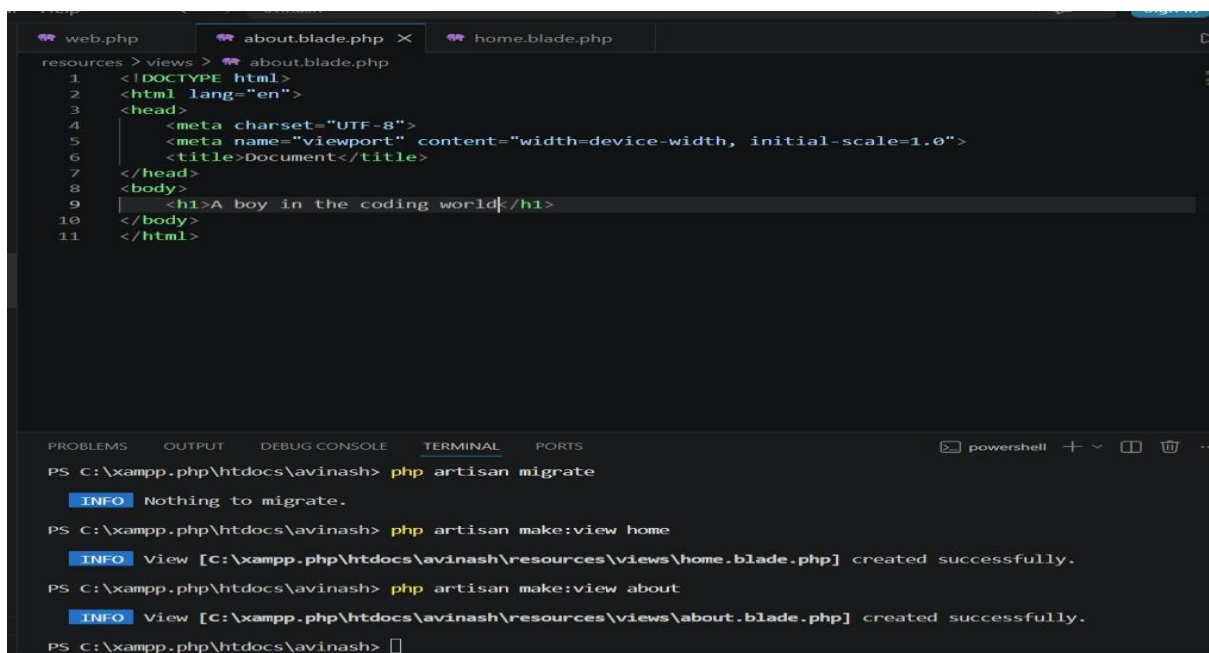

Step 3 :-

Creating a View and Defining a Route in Laravel

Start by running the command `php artisan make:view about` to create a new view file named **about**. Next, open the `web.php` file and define the route for the home page so Laravel knows how to handle incoming requests to that URL.

Once the route is set up, open the `about.blade.php` file and add the necessary HTML content to build your page structure.

After saving all changes, launch your browser and navigate to `http://localhost:8000/about` to see your home page displayed.

The screenshot shows a code editor with three tabs: `web.php`, `about.blade.php`, and `home.blade.php`. The `about.blade.php` file is open, displaying the following HTML code:

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4   <meta charset="UTF-8">
5   <meta name="viewport" content="width=device-width, initial-scale=1.0">
6   <title>Document</title>
7 </head>
8 <body>
9   <h1>A boy in the coding world</h1>
10 </body>
11 </html>
```

Below the code editor is a terminal window showing the following commands and output:

```
PS C:\xampp.php\htdocs\avinash> php artisan migrate
INFO Nothing to migrate.

PS C:\xampp.php\htdocs\avinash> php artisan make:view home
INFO View [C:\xampp.php\htdocs\avinash\resources\views\home.blade.php] created successfully.

PS C:\xampp.php\htdocs\avinash> php artisan make:view about
INFO View [C:\xampp.php\htdocs\avinash\resources\views\about.blade.php] created successfully.

PS C:\xampp.php\htdocs\avinash>
```
